About WowAlive

This application enables you mainly to know if your internet connection is working, realms are up and if authorization server is reachable. All this information is concerning World of Warcraft. WowAlive application also offers a tool utility named WowStart to start World of Warcraft in an automated way, just a click on a shortcut, after configuration is done.

System Requirements

Operating System: Microsoft Windows Me, Windows 2000, Windows XP 釋 , Windows Vista 🐬

Memory: 256 M or more for Windows Me/2000/XP

Free hard drive space: 3M

Software Requirements

Library: The .Net framework 2.0 must be installed on the machine.

Technical Support

If you have any problems with the application, you can contact technical support by emailing:

wowalive@free.fr

Please, make sure you tell as much information as you can about the problem you are experiencing, including any errors or warning messages that may have been displayed.

If you have any comments or suggestions for the next release, please feel free to post them.

Remarks

- The application described in this document, is corresponding to versions 1.x.x.
- Three languages are available: English, French and German.
- The list of realms is updated until the end of July 2008.
- All settings, configuration and options made by the user are saved in a XML configuration file.
- **Important:** The status of realms displayed on main interface of the application is coming from realms status web page of World of Warcraft internet site.

How to launch?

After installation, launch the application by double clicking on the shortcut available on the desktop.

After a while (if application is minimized), an icon is displayed in the tray.

Click now on the icon representing the application. The menu is displaying.

This menu gives to you the possibility to show the main window or to exit the application. Select the first choice. The screen described in chapter 'Main' is shown first.

Description

This application is composed of different screens. Here is the list of document parts with some main details. Each screen is captured and described in five following chapters.

- General: Main screen dedicated to display information about internet, authorization and realms.
- Options: This part is devoted to manage the main settings of the application.
- History: Screen available to display history of connectivity testing.
- About: Specific form in charge of giving information about WowAlive application.
- WowStart: Here can be defined user name and password used by WowStart to connect to Wow.

Main

This is the main screen to display following information:

- 1. If your internet connection is working or not.
- 2. Status of two realms is displayed. In addition, you can see if there is a queue for the realm.
- 3. Access to authorization server is working or not.

How to interpret the icon on the right?

Status	Interpretation
0	Application is running to check status of internet, realms or authorization connection.
•	For internet checking, this icon is showing that internet is not working. For realms, it is showing that realms are down. And at last for authorization, the server is not accessible from your PC.
	For internet checking, this icon is showing that internet is working. For realms, it is showing that realms are up. And at last for authorization, the server is accessible from your PC
?	The status of realm or authorization could not be verified. It can be that web page is not accessible or that internet is not working.
	There is now a queue on the corresponding realm.

Remark: If you let your pointer on the icon, a yellow message is displaying with some supplementary information.

Options

'Options' are accessible from the menu. You can find them in the menu 'Tools'. Then, select 'Options'.
